                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This polypeptide comprises the human nerve growth factor (NGF) beta chain precursor. Methods are provided for large-scale purification of neurotrophins, including mature NGF, suitable for CC clinical use. A claimed method comprises: (1) separating the neurotrophin from the other proteins using a hydrophobic interaction chromatography resin (HICR); and optionally (2) separating the neurotrophin from a chemical variant by high cc performance cation exchange chromatography (HPCEC). The processes can also be used for purification of e.g. mouse NGF (see AAW48887), CC brain-derived neurotrophic factor (see AAW48888), neurotrophin-4/5 (see AAW48890) and neurotrophin-3 (see AAW48889). The processes allow separation of neurotrophins from various undestrable misprocessed, cm.sifolded, size, glycosylated or charge forms. They allow selective separations from their variants and other molecules, and from other copolypeptides with high pr. The processes are applicable to starting materials from various sources, including fermentation or purifical or mammalian cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method of inducing cerebrospinal projection (CST) axon growth in a mammal with a spinal cord injury that involves a CST lesion by delivering a recombinant expression vector for CST neurotrophin, such as this sequence - nerve growth factor beta. The method is used to induce partial recovery of voluntary motor function in a mammal after disruption of corticospinal projections in the spinal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Treating spinal cord injuries in a mammal - by inducing cerebrospinal projection axons using a recombinant vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure;

CC sequence is derived from clone ALO49825. The polypeptide is 26958.5
CC daltons. PTMA polynucleotides and polypeptides are used in the
CC manufacture of a medicament for treating a syndrome associated with a
CC human disease, the disease selected from a pathology associated with a
CC PYMA. They may be useful in the treatment of various immune deficiencies
CC and disorders. These immune deficiencies may be genetic or caused by
CC viral as well as bacterial or fungal infections or may result from
CC autoimmune disorders. Autoimmune disorders which may be treated using
CC systemic lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary
CC inflammation, Guillian-Barre.syndrome, autoimmune thyroiditis, insulin
CC dependent diabetes mellitus, myasthenia gravis, graft-versus-host disease
CC and autoimmune inflammatory eye disease. Additionally PTMA may also be
CC useful to promote better or faster closure of non-healing wounds,
CC surgical and traumatic wounds. Furthermore, PTMA may also be useful for
CC gut protection or regeneration and treatment of lung or liver fibrosis,
CC systemic cytokine damage.

nic sensory ganglia
C;Genetics:
A;Gene: NGFB

A; Molecule type: mRNA A; Residues: 1-307 < RE3>

A; Status: preliminary; translated from GB/EMBL/DDBJ

A;Cross-references: GB:M14805; NID:g200053; PIDN:AAA39821.1; PID:g200054
A;Cross-references: GB:M14805; NID:g200053; PIDN:AAA39821.1; PID:g200054
C;Comment: The active molecule is a dimer of identical chains associated by noncovale
C;Comment: Nerve growth factor is found in submaxillary gland in large quantities and
nic sensory ganglia in vivo and in vitro and to increase cellular neurotubule levels

"Purification, characterization, and partial amino acid sequence of nerve growth factor from cobra venom.";
Biochemistry 15:26-34(1976).
-i- FUNCTION: NERVE GROWTH FACTOR IS IMPORTANT FOR THE DEVELOPMENT MAINTENANCE OF THE SYMPATHETIC AND SENSORY NERVOUS SYSTEMS. IT STIMULATES DIVISION AND DIFFERNTIATION OF SYMPATHETIC AND EMBRYONIC SENSORY NEURONS AS WELL AS BASAL FOREBRAIN CHOLINERGI NEURONS IN THE BRAIN.
-i- SUBBUNIT: HOMODIMER.
-i- SIMULARITY: BELONGS TO THE NGF-BETA FAMILY.
